WEATHER SYNOPSIS BY REGION

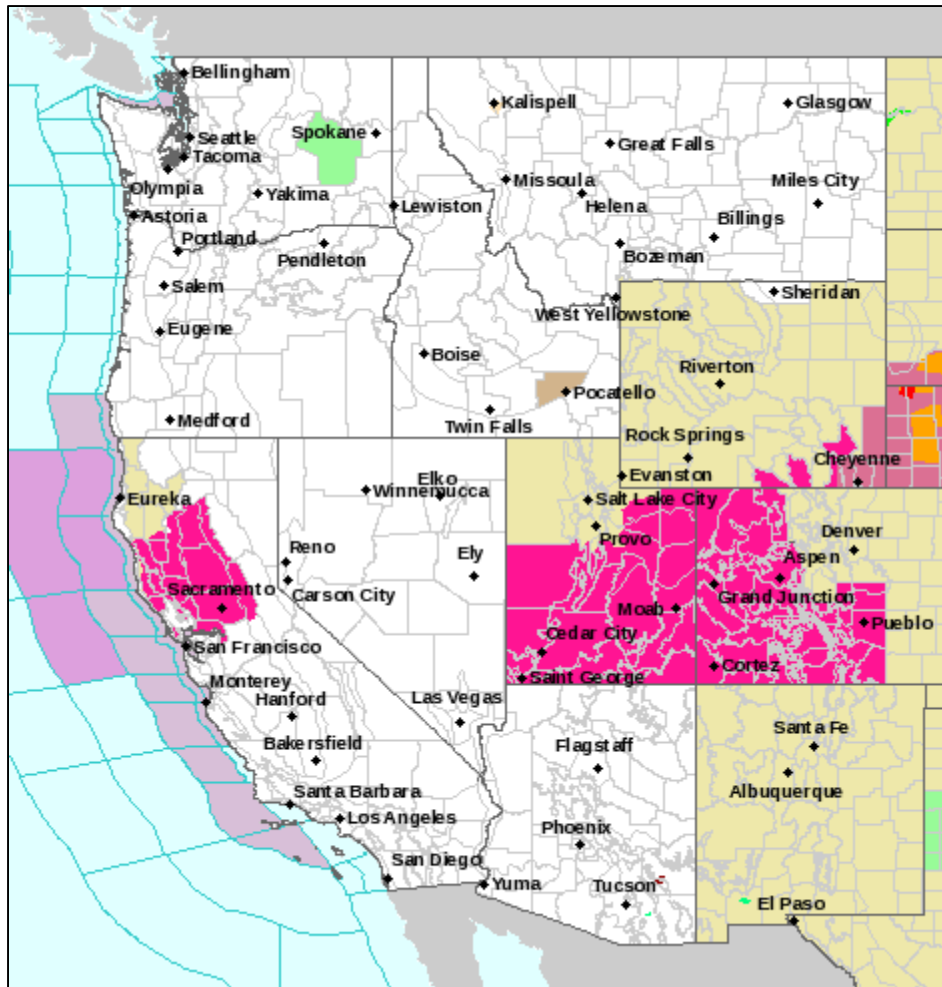

NORTHERN CALIFORNIA

High pressure to our west and a low pressure trough to our east will produce a NW-N flow aloft through Sunday. Breezy, dry, and warm weather will prevail through Sunday. N-NE winds will gust to 25-40 mph and locally higher from the western Sierra-Cascade slopes to the coast, with the peak winds occurring Saturday. Minimum afternoon relative humidity (RH) will be 7-17% and overnight and humidity will only recover to 20-30% in these areas. Outside of areas near the immediate coast temperatures will be 6-12 degrees above normal through Sunday. Although the winds will die off around midday Sunday, hot and dry conditions will continue into the evening. There is a high risk of significant fires in the Sacramento Valley and surrounding foothills and in the eastern portion of the Mid Coast through midday Sunday, with areas as far west as Hwy. 101 in the Mid Coast affected during the peak of the event on Saturday. The higher terrain of the North Coast will have a few areas of elevated fire potential due to gusty offshore winds and low RH on Saturday. A low pressure trough will move over the region Monday and remain in place all week. During the middle of the week it may produce strong enough winds east of the Cascade-Sierra crest to create High Risk conditions due to strong winds and low RH.

SOUTHERN CALIFORNIA

The back side of a Pacific trough will maintain near to a little below normal temperatures across the region today, with 70s to low 80s across the mountains and mid 80s to mid 90s in the valleys. Temperatures will warm 5 to 10 degrees across the inland valleys, foothills, mountains, and deserts this weekend as a ridge of high pressure builds into California from the Pacific Ocean. Temperatures will continue to be a little below normal across the coastal areas and coastal valleys this weekend due to a deep marine layer. An isolated afternoon thunderstorm will be possible across the Sierra Crest Sunday. A weak Pacific trough moving over the West Coast will cause inland locations to cool back down to near or a little below normal Monday through the middle of next week. Westerly winds of 20 to 30 mph will surface across the wind prone mountain and desert areas Monday afternoon through Wednesday evening. Minimum humidity will be mainly between 15% and 30% through the middle of next week, but it will be between 5% and 15% across the deserts. Strong high pressure over the eastern part of the United States will expand westward bringing significant warming and very low humidity away from the coast late next week.
